## Introduction

The following stage descriptions are intended to be representative of a specific range of abilities under each category, and as such are intended to be relative rather than absolute. It is expected that each teacher will progress through the stages in individual and unique ways, at varying speeds, although it is also recognised that for teachers in some teaching contexts the goal may be to become a good 'foundation' teacher. It is also likely that teachers may demonstrate aspects of two adjacent stages at any one time, and that it may not always be possible to place themselves neatly within one distinct stage.

While factors such as specific qualifications obtained, training undertaken or number of hours/years of formal teaching experience are all important, they may not necessarily be directly related to specific stages and are, therefore, not specified in the framework as such.

It is acknowledged that a certain level of language ability is required in order to teach language effectively, however any minimum language level required of the teacher is likely to vary depending on the teaching context and language levels of the group of learners being taught.

The detailed descriptions below are intended to capture the notion that gradual development of teachers' expertise over time involves growing understanding of teaching and learning, growing awareness of their own strengths, weaknesses and potential as a teacher, increasing sophistication in their planning, decision-making, teaching skills and reflection, as well as the ability to respond to a more complex range of classroom situations. Each of the paragraphs at each stage refers to the five categories of the Cambridge English Teaching Framework ('Learning and the Learner'; 'Teaching, Learning and Assessment'; 'Language Ability'; 'Language Knowledge and Awareness'; 'Professional Development and Values').
